

OIL WATER SEPARATOR TANK

It fulfills the pollution control norms by reducing waste going to drainage & causing soil pollution plus recovers product from the waste solvent mixture

DESCRIPTION :

- Made from M.S material
- Weight is around 1-4 ton
- It separates the moisture content from the oil with the help of gravitational force
- Oil gets separated from the mixture at the top of the tank while water remains below
- Thus water is removed from the bottom by opening the valve
- The tank has water and oil indicator that indicates their respective levels

BENEFITS :

- Oil can be recovered from the waste and mixture easily at the end of the process
-
